How to install The Arnul War

Nov 12, 2026 · @Rodrigo Arnul Quiñones Jaime

The Arnul War installs from a single file on Windows 10 or 11, with no administrator rights needed. There are two versions; the Godot one is recommended because it doesn't depend on a browser and includes multiplayer.

Requirements

	Godot version (recommended)	Browser version
System	Windows 10 or 11, 64-bit	Windows 10 or 11
Graphics	Vulkan-capable (almost all since 2016, including Intel UHD)	WebGL 2-capable (almost all since 2014)
Extra software	None	Microsoft Edge (built into Windows) or Google Chrome
Internet	Not needed	Not needed
Multiplayer	Yes, on a local network or online	No
Installer size	92 MB	7.8 MB

Which file to use

The files come from the **Claude juego** project folder, already built. To share the game, copy only the file in the "What to send" column (by USB, Drive or similar).

Option	Folder	What to send	Creates shortcuts
Godot with installer (recommended)	`dist_godot`	`TheArnulWar_Godot_Instalador.exe`	Yes
Godot without installing	`dist_godot`	`TheArnulWar.exe` (191 MB)	No
Browser with installer	`dist`	`TheArnulWar_Instalador.exe`	Yes
Browser portable	`dist`	`TheArnulWar_Portable.zip`	No

If you changed the game, rebuild the files before sending them: `construir_instalador_godot.ps1` for Godot and `construir_instalador.ps1` for the browser version.

Installation

Godot version (recommended)

The installer is downloaded from the game's GitHub repository.

1. Go to the Rodrigo6282/TheArnulWar repository. The instalador_godot folder only holds the instructions (`LEEME.txt`) and the installer script (`TheArnulWar.iss`), not the `.exe` .
2. To get the installer, open Releases (in the right-hand column of the main page) and pick the version marked **Latest**.
3. Expand **Assets** and download `TheArnulWar_<version>_Instalador.exe` , for example `TheArnulWar_1.3.1_Instalador.exe` .
4. Open the downloaded file. If "Windows protected your PC" appears, click **More info** and then **Run anyway**. It shows up because the installer isn't digitally signed.
5. Follow the wizard to the end. It creates a **The Arnul War** shortcut on the desktop and in the Start menu.

If you already have version 1.3.1 or later, the game tells you about each new version and updates itself from **MULTIJUGADOR → ACTUALIZAR**. On 1.3.0 or earlier, install the new version by hand once.

Without installing: from the same Assets, download `TheArnulWar_v<version>_Portable.zip` , unzip it into any folder and open `TheArnulWar.exe` .

Browser version

1. Double-click `TheArnulWar_Instalador.exe` and accept the SmartScreen warning as above.
2. Answer **Yes** (Sí).
3. The game installs to `%LOCALAPPDATA%\Programs\TheArnulWar` , creates a **The Arnul War** shortcut on the desktop and in the Start menu, and opens on its own.

Portable: unzip `TheArnulWar_Portable.zip` into a folder or onto a USB drive and double-click `Jugar.vbs` . You can also open `index.html` in any browser.

Playing

Open the game from the desktop or Start menu shortcut and choose **Operación** (waves of soldiers) or **Zombis** (rounds). The in-game menus are in Spanish.

Multiplayer (Godot version only, free-for-all to 20 kills):

1. One player goes to **MULTIJUGADOR** and clicks **CREAR PARTIDA** (create match).
2. The others, on the same Wi-Fi or wired network, see the match under **PARTIDAS EN TU RED** (matches on your network) and click **UNIRSE** (join).
3. The first time, Windows asks about the firewall: click **Allow access**.
4. Over the internet, the host opens UDP port 7777 on their router, or everyone uses a gaming VPN (Radmin VPN, ZeroTier) and "Unirse por IP" (join by IP).

Basic controls: WASD to move, mouse to look, left click to shoot, right click to aim, R to reload, Esc to pause, Alt+Enter for fullscreen.

Common problems and uninstalling

Problem	Fix
"Windows protected your PC"	More info → Run anyway
The game runs slowly	Lower **Calidad gráfica** (graphics quality) to Media or Baja in the main menu; Baja suits integrated Intel graphics
Friends can't see the match on the network	Check you're on the same network and that Windows allowed access through the firewall; otherwise use "Unirse por IP"
The browser version doesn't open in its own window	Install Microsoft Edge or Google Chrome; without them it opens in the default browser

To uninstall: Settings → Apps → Installed apps → **The Arnul War** (or **The Arnul War (Godot)**) → Uninstall. In the browser version, uninstalling also deletes your settings, high score and medals.
